Capability statement

Mobile plant, field service & labour hire

ABOUT PORT CITY

Our company

How we started

Founded by Matt Leigh in 2020, Port City Heavy Diesel Maintenance began with just one dedicated diesel fitter and a single field service vehicle, working seven days a week to provide reliable breakdown support, repairs and maintenance across a diverse range of machinery and industries.

Built on hard work, determination and a commitment to quality workmanship, the business has grown from its humble beginnings into a trusted provider of specialised diesel maintenance and field service solutions throughout Central Queensland.

How we have grown

From servicing small civil and quarrying contracts to becoming a trusted, go-to contractor for major OEMs and some of Australia's largest civil and mining operators, Port City Heavy Diesel Maintenance has built its name on performance, reliability and a reputation that speaks for itself.

What started with one fitter and one field service vehicle has grown into a team of 14 highly skilled technicians, trusted to support some of the industry's biggest names.

Our growth hasn't been driven by promises. It's been earned through results. Through consistent workmanship, rapid response times and the ability to deliver skilled labour when it matters most, we've forged long-standing partnerships and established ourselves as a contractor our clients can rely on.

From the smallest breakdown to supporting major industry operations, our commitment remains the same: deliver exceptional service, back our people and earn our reputation on every job.

Matt Leigh, founder

From the foundations laid during my apprenticeship, I have carried forward the values of precision, quality workmanship and pride in every job, instilling these same standards into every member of our team.

Whether it's a minor repair or a complete machine rebuild, our philosophy remains the same: OEM standards are our benchmark, not our ceiling.

We don't simply aim to meet industry expectations; we strive to exceed them, delivering workmanship, reliability and attention to detail that set Port City Heavy Diesel Maintenance apart.

SCOPE OF WORK

Our capabilities

Proudly serving as a primary contractor to major Original Equipment Manufacturers (OEMs), PCHDM delivers highly skilled, specialised labour and maintenance solutions across quarrying and civil, mining, heavy transport and construction throughout Central Queensland.

01 Component rebuilds

Major component replacements and rebuilds, including engines, transmissions, differentials and hydraulic systems.

02 Field service and breakdowns

Breakdown response and on-site repairs with fully equipped field service vehicles.

03 Shutdown and project labour

Planned shutdown maintenance and labour support.

04 Labour hire

Skilled labour supplied under our own Queensland labour hire licence, in your company colours if the contract calls for it.

05 Diagnostics and fault finding

Breakdown diagnostics, fault finding and repairs.

06 Preventative maintenance and servicing

Scheduled servicing, inspections and ongoing fleet maintenance.

Industries we support

Quarrying and civil · Mining · Heavy transport · Construction

Component rebuilds and mechanical repairs.

Field service at the machine.

OUR APPROACH

What sets us apart

When the job is too complex, too challenging or outside the standard procedure, that's where Port City Heavy Diesel Maintenance stands apart.

We don't just follow procedures. When the situation demands it, we develop our own. From complex mechanical failures and specialised rebuilds to repairs that require innovative thinking, our team has the technical knowledge, hands-on experience and confidence to find solutions where others may struggle.

Our approach is built on a standard established from day one: every repair, big or small, should meet OEM standards, with the ambition to exceed them.

We pride ourselves on more than just supplying skilled labour. We provide technicians who can think independently, diagnose accurately, develop practical repair strategies and execute work to an exceptional standard.

Problem-solving beyond the manual

Developing job-specific repair procedures and practical solutions for complex, non-routine work.

OEM-level workmanship

Applying manufacturer-quality standards across everything from minor repairs to major component rebuilds.

Independently capable technicians

Hand-selected tradespeople trusted to make informed decisions and deliver results without constant supervision.

Versatility across industries

Supporting everything from small civil equipment to some of the largest mining machines in operation.

Reliability when it matters most

Delivering skilled technical support during critical breakdowns, major rebuilds and demanding operational conditions.

Relationships built on results

Earning the trust of major OEMs and contractors through consistent workmanship, accountability and proven performance.

We aren't simply there to fill a labour requirement. We're there because our customers trust us to get the job done, especially when the solution isn't straightforward.

SELECTED WORK

Our projects

KOMATSU AUSTRALIA · GLADSTONE

WA900-8 full-life rebuild

The task

Komatsu needed additional capacity to deliver Australia's first certified Komatsu WA900-8 full-life rebuild to a tight deadline.

Our part

Our technicians helped develop job-specific procedures, coordinated critical stages and worked to OEM standards.

The Komatsu WA900-8 rebuilt by the Port City team.

What changed

The rebuild helped establish Port City as a primary contractor for Komatsu's Gladstone operations.

Komatsu Gladstone, return work

A WA600 engine mid-life rebuild, a D61 engine mid-life rebuild and electrical harness repairs under tight Christmas deadlines.

Skid steer no start fault

A persistent fault that had been difficult to pin down. Found and fixed by a Port City apprentice backed by senior technicians within a couple of hours, saving a crane lift and freight to Townsville.

Labour hire for a major contract

Port City fitters in the customer's uniforms and rebranded service vehicles so the customer could scale up.

PREQUALIFICATION

Licences and cover

For procurement teams and head contractors reviewing a maintenance or labour hire partner.

Licences and registration

Queensland labour hire licence LHL-09274-L2M8X

Current to 1 August 2027, listed on the public register.

Refrigerant trading authorisation AU55271

Issued by the Australian Refrigeration Council, current to 26 October 2027.

ABN 55 967 578 153

Registered and current.

Insurance cover

Public and products liability

\$20 million, insured through The Barn Underwriting Agency, current to 25 August 2027.

Workers compensation

WorkCover Queensland, current to 30 June 2027.

Certificates of currency available on request

For your supplier pack

Request certificates of currency, trade qualifications and site tickets when you enquire. Tell us which site and scope the paperwork needs to cover.

Every technician is hand picked for their experience and workmanship, and qualifications are provided on request.

Site tickets and inductions

Technicians' tickets and inductions are provided on request, for the site you are working on.

Port City Heavy Diesel Maintenance

ABN 55 967 578 153 · GST registered from 25 August 2020.
Based in Gladstone and Rockhampton, Queensland.

OUR PEOPLE

Tiareee Wimbus, co-founder

As one of the original founders of Port City Heavy Diesel Maintenance, Tiaree has been a driving force behind the company's growth, leadership and culture since its establishment in 2020.

Overseeing the financial, administrative and organisational foundations of the business, Tiaree plays a critical leadership role in managing accounts, payroll, procurement, workforce coordination and strategic planning. Her ability to balance the demands of a growing operation with the needs of its people has been instrumental in shaping Port City Heavy Diesel into the company it is today.

But perhaps Tiaree's greatest contribution is the leadership philosophy she has built from personal experience.

As a mother who has raised a family alongside a partner working long hours in the heavy diesel industry, Tiaree understands firsthand the sacrifices made by the families behind the workforce. She knows the impact that demanding rosters, extended hours and time away from home can have, not only on employees but also on the partners and children supporting them.

That understanding has become a benchmark for how Port City Heavy Diesel leads and supports its people.

From coordinating rosters that accommodate family commitments wherever operationally possible to maintaining genuine communication and checking in on the wellbeing of employees and their families, Tiaree has established a leadership approach where people are valued as individuals, not simply numbers on a roster.

As our employees grow through the different stages of life, our company must grow with them.

Whether it's supporting a young apprentice beginning their career, a fitter starting a family, or an experienced tradesperson balancing work and personal commitments, Tiaree is committed to creating an environment where employees can build successful careers without losing sight of what matters most outside of work.

This people-first leadership extends equally to customers, ensuring that as Port City Heavy Diesel expands, the personal relationships, accountability and genuine care that established its reputation remain at the forefront of every interaction.

Together, Matt and Tiaree have built more than a successful heavy diesel business. They have established a business where high standards of workmanship and strong family values go hand in hand.

Because at Port City Heavy Diesel, we don't just invest in the people who work for us. We invest in the people and families who grow alongside us.

SAFETY AND ENVIRONMENT

Waste and fluid disposal

At Port City Heavy Diesel Maintenance, environmental responsibility isn't just about meeting industry standards. It's personal.

We're a family-owned and operated business, built by people who enjoy the very environment we work to protect. We love spending our weekends fishing, exploring our national parks and enjoying everything this great country has to offer.

Our philosophy is simple: we enjoy these places today, so it's our responsibility to protect them for our children to enjoy tomorrow.

That's why we take waste management seriously. Through local waste oil disposal and recycling facilities in Gladstone and Rockhampton, we ensure used oils are handled and separated responsibly, minimising contamination and preserving their potential to be recycled and re-refined.

We understand that every litre of oil disposed of incorrectly has the potential to impact the waterways, land and ecosystems we value.

For us, doing the job properly doesn't stop when the machine is back up and running. It means taking responsibility for what we leave behind.

Because the same waterways we work alongside today are the ones we want to take our children fishing in tomorrow.

Waste handling

01	02	03	04
Collect	Contain	Remove	Dispose
Oil, coolant and filters at the machine.	Suitable, labelled containment on site.	Transport waste from the site.	Through a licensed waste facility.

START WITH THE MACHINE

Discuss your equipment

For a breakdown, planned maintenance, rebuild or labour hire requirement, talk to Matt Leigh about the work.

01

The equipment

Machine type, model and the fault or maintenance scope.

02

The location

Site, access and any induction requirements.

03

The timeframe

When you need support and any shutdown dates.

Where we work

Our operations now extend from the Bowen Basin across Banana Shire and Central Queensland, down to Chinchilla, providing reliable maintenance, breakdown and field service support across the mining, civil and industrial sectors.

Based in Gladstone and Rockhampton, with 14 fully equipped field service vehicles. Each technician has been personally hand-picked for their experience, workmanship and commitment to delivering quality service.
