

SERVICE CAPABILITY STATEMENT

Quarrying & civil

Plant maintenance & field service

QUARRYING AND CIVIL

Our services

Quarrying and civil operations involve the extraction, processing, transportation and placement of materials, alongside bulk earthworks, road construction, site preparation and infrastructure development.

At Port City Heavy Diesel Maintenance, we provide specialised mechanical maintenance, breakdown support, servicing and repairs across a wide range of heavy mobile and fixed plant equipment.

Our technicians have extensive hands-on experience maintaining and repairing crushing and screening plants, scrapers, side tippers, articulated haul trucks, excavators, dozers, graders and supporting equipment.

How we support you

Whether it's scheduled preventative maintenance, major component replacements or urgent breakdown response, our focus remains on minimising downtime, maximising equipment availability and delivering workmanship that meets or exceeds OEM standards.

We understand that in quarrying and civil operations, equipment downtime directly impacts production, project deadlines and profitability. That's why our customers rely on PCHDM for skilled technicians who can diagnose faults efficiently, carry out quality repairs and get equipment back into operation.

Field service at a mobile screening plant.

SCOPE OF WORK

Equipment we support

From large-scale quarry production to major civil infrastructure projects, PCHDM delivers reliable mechanical support across the equipment that keeps operations moving.

01 Crushing equipment

Jaw crushers, cone crushers, impact crushers and mobile crushing plants.

02 Screening equipment

Vibrating screens, scalping screens, mobile screening plants and conveyors.

03 Earthmoving equipment

Bulldozers, excavators, wheel loaders, graders and scrapers.

04 Haulage equipment

Articulated dump trucks, rigid haul trucks, side tippers, water carts and prime movers.

05 Civil construction equipment

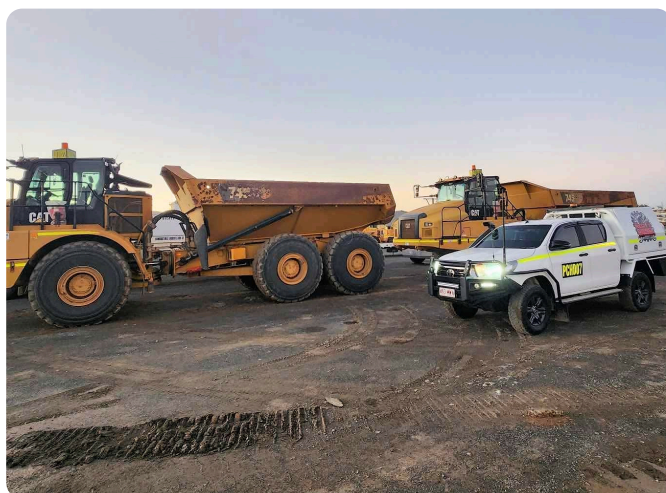

Compactors, rollers, skid steers, backhoes and telehandlers.

06 Quarry support equipment

Generators, pumps, hydraulic systems, rock breakers and material handling equipment.

Field service at a mobile screening plant.

Articulated dump trucks on site.

SELECTED WORK

Our projects

FAULT FINDING · SKID STEER

Running again in a couple of hours

The task

A persistent no-start fault had been difficult to diagnose. A crane lift and freight to Townsville were being considered.

Our part

A Port City apprentice, backed by senior technicians, traced the fault and repaired it on site.

Port City field service at a quarry. Fleet photograph; the skid steer job is not pictured.

What changed

The skid steer was running within a couple of hours, avoiding the crane lift and freight to Townsville.

Komatsu Australia, WA900-8 full-life rebuild

Australia's first certified Komatsu WA900-8 full-life rebuild, delivered to a tight deadline with Port City brought in to add capacity. Our team helped develop job-specific procedures, coordinated critical stages and worked to OEM standards. It helped establish Port City as a primary contractor for Komatsu's Gladstone operations.

READY FOR YOUR SUPPLIER REVIEW

Licences and cover

Licence details, cover and site documentation in one place.

Licences and registration

Queensland labour hire licence LHL-09274-L2M8X

Current to 1 August 2027, listed on the public register.

Refrigerant trading authorisation AU55271

Issued by the Australian Refrigeration Council, current to 26 October 2027.

ABN 55 967 578 153

Registered and current.

Insurance cover

Public and products liability

\$20 million, insured through The Barn Underwriting Agency, current to 25 August 2027.

Workers compensation

WorkCover Queensland, current to 30 June 2027.

Certificates of currency available on request
